*The computed elevation to which floodwater is anticipated to rise during the base flood (100 Year Flood). Base Flood Elevations (BFEs) are shown on Flood Insurance Rate Maps (FIRMs) and on the flood profiles. The BFE is the regulatory requirement for the elevation or floodproofing of structures. The relationship between the BFE and a structure's elevation determines the flood insurance premium. Datum of measurement is NAVD1988.

Zone VE: A coastal area inundated by 100-year flooding and subject to a velocity hazard (wave action) where BFEs have been determined. **Zone AE:** An area inundated by 100-year flooding, for which BFEs have been determined. **Zone AO/AH:** An area inundated by 100-year flooding; (AO) Sheet flow, ponding, or shallow flooding where Base Flood Depths are provided; (AH) Shallow flooding base floodplain where BFE's have been determined. **Zone A:** An area inundated by 100-year flooding, for which no BFEs have been determined. **Zone 0.2PCT (0.2 PCT ANNUAL CHANCE FLOOD HAZARD/X500):** An area inundated by 500-year flooding with average depths of less than 1 foot or with drainage areas less than 1 square mile or an area protected by levees from 100-year flooding. **Zone X:** An area of minimal flood hazard.
